

SmartPick Backup

Secure, Simple and Smart

ABOUT US

SmartPick Solutions, Inc. is a privately owned company founded in 1998. Located in the heart of Silicon Valley, SmartPick has provided high-availability storage & backup solutions to Fortune 500 companies. Our technical team has been in the storage industry since the early 1980's with broad and in-depth experience with all types of data storage and retrieval technology. We have designed and implemented many large-scale hierarchical storage and backup solutions.

SmartFiler Backup Appliance

SmartFiler appliances are specifically designed to bring enterprise class technology and solutions to small and medium businesses. From a small office that has 100GB of data to a small enterprise with over 10 TB data can use SmartFiler Appliances for securing their data onsite as well as offsite. Our appliance software uses advanced data deduplication technology and is built on enterprise class operating systems. It offers a simple and easy to use web interface for managing all the data storage and backup needs of any small business.

- Specially designed SmartPick Operating System (OS) for Backup
- Custom-made to bring Enterprise-class Backup technology & solutions to Small, Medium Business. Capacity available from 500GB to 16TB.
- Backup to disk without license, software and agent. No additional costs
- No Virtual Private Network (VPN) or Tunneling needed

The SmartFiler backup solution is designed with the basic philosophy that backup operation should be simple, secure and reliable, and create data backup both onsite and remote offsite. There are many backup software applications in the market that provide a gamut of features and flexibility. These solutions are not only difficult to use but often fail to provide reliable backups. Though online backup services claim to be a replacement for remote offsite data backups using tapes, it does not work for large data volumes due to limited WAN speeds.

SmartPick Backup Service uses the same technology that is used by large corporations and banks to perform reliable remote backup. There is no tape or other hardware or software to buy and maintain. There are no tapes to label, catalog and transport to offsite location.

Onsite SmartFiler can be configured to take hourly snapshots of your data to enable point-in-time recovery during the business day. Recovering data from SmartFiler is as simple as drag-and-drop from SmartFiler to your folder!

No more haggling with cumbersome backup software or tape backup systems and no more monthly payments for an offsite backup service*. You own your offsite backup solution. You keep your offsite SmartFiler at a place of your choice for secure data storage; no more offsite data storage in any mystical cloud!
