

# VeriTape

VeriTape, your Assurance on Data Recovery

## What is VeriTape?

VeriTape Health Analyser, a Tape diagnostic tool and solution that enables organizations to proactively monitor and manage the health of their tape media. All LTO / 3592 cartridges contain an internal memory chip with vital information about the cartridge. VeriTape Analyser read & interprets this data, to assist companies in managing all the tapes (data) / drives effectively and efficiently

## Identify Deteriorating Cartridges Before Fail

Most systems identify defective cartridges after they fail. These cartridge failures can be disruptive and expensive. But with VeriTape® you can monitor any cartridge and retire aging or damaged ones before they fail, not afterwards.

## Storing Mission Critical Data

When saving critical data to tape you must have complete confidence that your data can be recovered without problems.

VeriTape® enables you to identify and eliminate any cartridge that does not meet your standards.

## Analyzing Cartridges and Tape Drives

Many problems that appear to be cartridge problems are caused by tape drives that require service. VeriTape® analyzes both the cartridges and the tape drives. Failing tape drives are automatically identified before they can contaminate or damage a large number of cartridges. No more guessing whether a problem is caused by a failing drive or by a damaged cartridge.

### Action Recommendation

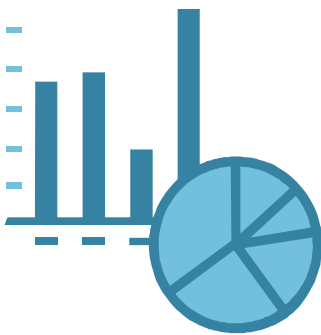

VeriTape® gives you a recommendation for corrective action for every identified problem.

### Independent Evaluation You Can Trust

MPTapes, Inc. the manufacturer of VeriTape® is independent from all cartridge and drive manufacturers. We use all available data for our evaluation, even if some of the data lower the score for a particular cartridge or drive vendor.

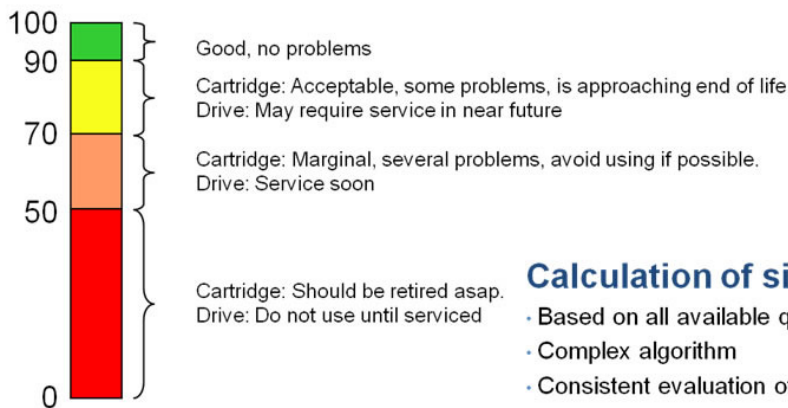

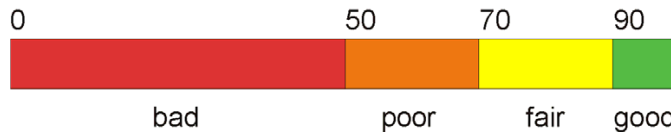

### Compatible with Spreadsheets and Databases

Data collected by the VeriTape® reader can be easily moved to spreadsheets and databases. If, for example, you prefer to use Microsoft Excel to view and display the data just copy the data to Excel.

### Veri Score and Health Check

VeriScore™

#### Calculation of single quality number

- Based on all available quality data
- Complex algorithm
- Consistent evaluation of cartridge and drive quality
